

Spatial data: discovering geopandas

Lino Galiana

Version of September 29, 2026

Geolocated data has multiplied in recent years, whether it is open data or geolocated digital traces of the *big data* type. For spatial data, the **GeoPandas** package extends the features of the **Pandas** ecosystem to make it possible to handle complex geographic data in a simple way.

 **Automatically generated PDF.** This document is produced from the course website and may contain formatting issues. For an up-to-date version adapted to your reading, visit the course page: pythonds.linogaliana.fr.

Table of contents

Informations additionnelles 1

The **GeoPandas** part has recently evolved. You can find the content related to **GeoPandas** in the following chapter (lectures and exercises):

- [Introduction to spatial data with Geopandas](#)

Informations additionnelles

Python environment

This site was built automatically through a **Github** action using the **Quarto** reproducible publishing software (version 1.10.18).

The environment used to obtain the results is reproducible via **uv**. The **pyproject.toml** file used to build this environment is available on the [linogaliana/python-datascientist](#) repository
